**Additional Backup Information**

The Euclid-Wilson project area is bounded by Cumberland Road on the south, West Oltorf Street on the north, South Congress Avenue on the east and South 1st Street on the west. The area consists of mixed use land development of single family residential, multi-family residential, and commercial usage. The existing storm drain system was constructed in conjunction with the single family houses circa 1950. Development of the area occurred prior to the publication of the first City of Austin Drainage Criteria Manual in 1977.

The City of Austin (COA) has received several requests from local residents along Euclid Street and Wilson Street in south Austin to mitigate frequent flooding problems during heavy rain events. Numerous flood complaints have been registered in the Watershed Protection Department's database. Additional drainage issues have been identified at other locations within the neighborhood and project area. Therefore, the City has executed a Professional Services Agreement to redesign the storm drain system to alleviate flooding.

This proposed amendment will secure funding for the Consultant to support the construction effort. This will include reviewing submittals, attending weekly construction meetings, coordinating with utility companies to resolve utility conflicts during construction, responding to requests for information, assisting in preparing change orders, attending the final project walk-through, preparing the Engineer's Concurrence Letter, preparing an Asset Retirement Form, and performing a one-year warranty walk-through.
